

SERVICE BULLETIN

Model SC Fork Spindle Bearings

Model #: SC-100 and SC-090

Date: 6/19/2008

This is an informational bulletin only, no action is required.

There are two different types of the 1-1/4" tapered roller bearing. Both will fit the fork spindle but only one is correct. At first glance they look identical but there is a difference that affects how they are installed.

Part number 80-011-10:

This is the correct bearing. The inner race has only a small radius at both ends.

Part number 80-011-00:

Do not use this bearing on the SC-100 or SC-090. The inner race has a large radius at one end and a small radius at the other.

Do not use the 80-011-00 for the fork spindle bearings as it may result in misalignment of the steering and improper preload due to poor fit against the upper flat washer and lower spindle shoulder.
